

1. (Currently amended) A mechanism for a terminal service organization enlisting a customer for a web-service, comprising:

means for providing an avenue by which said terminal service organization can refer said customer to said web-service; ~~wherein said avenue identifies said terminal service organization to said web-service;~~ further comprising:

means for identifying said terminal service organization to said web service organization as included in a request form;

means for said customer using said avenue to engage said web-service to provide at least one web-service product customized by at least one instruction from said customer, to create a web-site revenue for said web-service; and

means for said terminal service organization receiving an organization revenue based upon said customer using said avenue to create said web-site revenue;

wherein said terminal service organization includes at least one member of the collection comprising: a funeral home, a retirement community, a hospice, a hospital, a sanitarium, a temple, a synagogue, a mosque, a church, a shrine, a nursing home, a mausoleum, a cemetery, and an assisted living facility;

wherein said web-service product includes at least one web-site component, which is an instance of a member of the web-site component collection;

wherein said web site component collection comprises an audio stream, a video stream, an interactive model, a text, a still frame, a web page layout, a security control, a hosting means for at least a second of said web-site components, a transferring means for at least one of said second web-site components, and an interactive means for generating at least one of said second web-site components.

2. (Original) The mechanism of Claim 1, wherein said web-site component collection further includes at least one member of the web system collection comprising: a memorial web page system, a personal web page system, a family web page system, and a community web page system.

3. (Original) The mechanism of Claim 1, wherein said instruction includes at least one member of an instruction collection about at least one of said web site components.

1 4. (Original) The mechanism of Claim 3, wherein said instruction collection includes an addition  
2 instruction for said web-site component, a removal instruction for said web-site component, an  
3 alteration instruction for said web-site component.

1 5. (Original) The mechanism of Claim 1, further comprising at least one member of the collection  
2 comprising:

3 said web-service product provided to a means for serving a community;

4 said hosting means is locally accessible by at least one member of said community;

5 wherein said community includes at least one instance of at least one member of the  
6 community type collection comprising: a nuclear family, an extended family, a distributed family, an  
7 intentional community, a professional community, a fraternal community, a local community, and a  
8 religious community.

1 6. (Original) The mechanism of Claim 5, wherein the means for serving said community is  
2 comprised of at least one member of the collection comprising:

3 said web-service product used by at least one local computer system operated by at least one  
4 member of said community;

5 a web-site hosting said web-service product accessible only by said community members; and  
6 a local means for hosting said web-service product accessible by said community members.

1 7. (Original) The mechanism of Claim 1, wherein said hosting means is comprised of at least one  
2 member of the hosting means collection comprising:

3 a host web-site providing at least said second web-service component;

4 a network capable server hosting said host web-site;

5 a local server hosting said host web-site; and

6 a local computer system providing at least said second web-service component;

7 wherein each of said local server and said local computer system are imperceptible to local  
8 area networks in the vicinity of said housing means.

1 8. (Original) The mechanism of Claim 1, wherein said transferring means is comprised of at least  
2 one member of the transfer means collection comprising:

3 a removable memory device provided by said web-service containing at least said second  
4 web-site component;

5 a download provided by said web-service containing at least said second web-site component;  
6 and

7 a shipping means for said hosting means; and  
8 shipping said removable memory device.

1 9. (Original) The mechanism of Claim 1, wherein said avenue includes a computer system  
2 identifying said customer and identifying said terminal service organization, to said web-service, to  
3 provide said customer instruction to said web-service.

1 10. (Original) The mechanism of Claim 9, wherein said computer system is further comprised of a  
2 program system including at least one program step residing in a memory accessibly coupled to a  
3 computer, at least partially implementing the steps comprising:

4 indicating said terminal service organization to said web-service;  
5 identifying said customer to said web-service; and  
6 providing said customer instruction to said web-service.

1 11. (Original) The mechanism of Claim 10, wherein the program step identifying said customer is  
2 further comprised of the program step said customer determining the mechanism for providing said  
3 revenue to said web-service.

1 12. (Original) The mechanism of Claim 10, wherein the program step providing said customer  
2 instruction is further comprised of the program steps of:

3 providing said customer with a menu containing at least one instruction option;  
4 said customer indicating at least one instruction option to create a customer instruction; and  
5 sending said customer instruction to said web-service.

1 13. (Currently amended) The mechanism of Claim 1, wherein said ~~avenue at least partially~~  
2 ~~implemented as a request form~~ further comprising:

3 means for identifying said customer to said web-service;

4 means for providing said instruction to said web-service; and

5 means for identifying said terminal service organization perceptible by at least said web-  
6 service.

1 14. (Original) The mechanism of Claim 13, wherein said request form is a member of the request  
2 media collection comprising: a computer accessible request form, a paper request form, and an audio  
3 accessible request form.

1 15. (Original) The mechanism of Claim 14, wherein the means for identifying said terminal service  
2 organization in said paper request form includes at least one member of the collection comprising:  
3 a bar code marking identifying said terminal service organization;  
4 a background marking identifying said terminal service organization; and  
5 a foreground marking identifying said terminal service organization.

1 16. (Original) The mechanism of Claim 1, wherein the means for said terminal service organization  
2 receiving said organization revenue includes at least one member of the revenue reception collection  
3 comprising:

4 means for a bank account controlled by said terminal service organization receiving a  
5 monetary transfer of said organization revenue; and

6 means for said terminal service organization receiving a check for said organization revenue.

1 17. (Original) The mechanism of Claim 1, wherein the interactive means comprises a stream  
2 generation component, an interviewer component and an editor component;

3 wherein said stream generation component include generating at least one member of the  
4 collection comprising said text, said audio stream and said video stream;

5 wherein said interview component includes a member of an interviewer option collection,  
6 comprising a no-interviewer option, a minimal interviewer option, a maximal interviewer option;

7 wherein said interview component further includes an interview language selection;

8 wherein said editor component includes a member of the editing collection comprising a no-  
9 editing option, a minimal editing option, a more editing option, and a maximal editing option.

1 18. (Currently amended) A method for a terminal service organization enlisting a customer for a  
2 web-service, comprising the steps of:

3 providing an avenue by which said terminal service organization can refer said customer to  
4 said web-service;

5 said avenue identifying said terminal service organization to said web-service, further  
6 comprising the step of:

7 identifying said terminal service organization to said web service organization as included in a  
8 request form;

9 said customer using said avenue to engage said web-service to provide at least one web-  
10 service product customized by at least one instruction from said customer, to create a web-site  
11 revenue for said web-service; and

12 said terminal service organization receiving an organization revenue based upon said customer  
13 using said avenue to create said web-site revenue.

1 19. (Original) The method of Claim 18, wherein said terminal service organization includes at least  
2 one member of the collection comprising: a funeral home, a retirement community, a hospice, a  
3 hospital, a sanitarium, a temple, a synagogue, a mosque, a church, a shrine, a nursing home, a  
4 mausoleum, a cemetery, and an assisted living facility.

1 20. (Original) The method of Claim 18, wherein said web-service product includes at least one web-  
2 site component, which is an instance of a member of the web-site component collection; and

3 wherein said web site component collection comprises an audio stream, a video stream, an  
4 interactive model, a text, a still frame, a web page layout, a security control, a hosting means for at  
5 least a second of said web-site components, a transferring means for at least one of said second web-  
6 site components, and an interactive means for generating at least one of said second web-site  
7 components.

1 21. (Original) The method of Claim 18, wherein said web-site component collection further includes  
2 at least one member of the web system collection comprising: a memorial web page system, a  
3 personal web page system, a family web page system, and a community web page system.

1 22. (Original) The method of Claim 18, wherein said instruction includes at least one member of an  
2 instruction collection about at least one of said web site components.

1 23. (Original) The method of Claim 22, wherein said instruction collection includes an addition  
2 instruction for said web-site component, a removal instruction for said web-site component, an  
3 alteration instruction for said web-site component.

1 24. (Original) The method of Claim 18, further comprising at least one member of the collection  
2 comprising the steps of:

3 providing said web-service product to a means for serving a community; and

4 at least one member of said community locally accessing said hosting means;

5 wherein said community includes at least one instance of at least one member of the  
6 community type collection comprising: a nuclear family, an extended family, a distributed family, an  
7 intentional community, a professional community, a fraternal community, a local community, and a  
8 religious community.

1 25. (Original) The method of Claim 24, wherein the step of serving said community is comprised of  
2 at least one member of the collection comprising the steps of:

3 at least one local computer system operated by at least one member of said community using  
4 said web-service product;

5 a web-site hosting said web-service product accessible only by said community members; and

6 hosting said web-service product locally accessible by said community members.

1 26. (Original) The method of Claim 18, wherein said hosting means is comprised of at least one  
2 member of the hosting means collection comprising:

3 a host web-site providing at least said second web-service component;

4 a network capable server hosting said host web-site; a local server hosting said host web-site;

5 and

6 a local computer system providing at least said second web-service component;

7 wherein each of said local server and said local computer system are imperceptible to local

8 area networks in the vicinity of said housing means.

1 27. (Original) The method of Claim 18, wherein implementing said transferring means is comprised  
2 of at least one member of the transfer means collection comprising the steps of:

3 providing a removable memory device containing at least said second web-site component;

4 providing a download containing at least said second web-site component; shipping said  
5 hosting means; and

6 shipping said removable memory device.

1 28. (Original) The method of Claim 18, wherein said avenue includes a computer system identifying  
2 said customer and identifying said terminal service organization, to said web-service, to provide said  
3 customer instruction to said web-service.

1 29. (Original) The method of Claim 28, wherein said computer system is further comprised of a  
2 program system including at least one program step residing in a memory accessibly coupled to a  
3 computer, at least partially implementing the steps comprising:

4 indicating said terminal service organization to said web-service;

5 identifying said customer to said web-service; and

6 providing said customer instruction to said web-service.

1 30. (Original) The method of Claim 29, wherein the step identifying said customer is further  
2 comprised of the step of said customer determining the mechanism for providing said revenue to said  
3 web service.

1 31. (Original) The method of Claim 29, wherein the step providing said customer instruction is  
2 further comprised of the steps of:

3 providing said customer with a menu containing at least one instruction option;

4 said customer indicating at least one instruction option to create a customer instruction; and

5 sending said customer instruction to said web-service.

1 32. (Currently amended) The method of Claim 18, wherein said avenue ~~at least partially~~

~~implemented as a~~ implementing said request form, further comprising the steps of:

- identifying said customer to said web-service;
- providing said instruction to said web-service; and
- identifying said terminal service organization perceptible by at least said web-service.

33. (Original) The method of Claim 32, wherein said request form is a member of the request media collection comprising: a computer accessible request form, a paper request form, and an audio accessible request form.

34. (Original) The method of Claim 33, wherein the step identifying said terminal service organization in said paper request form includes at least one member of the collection comprising the steps of:

- a bar code marking identifying said terminal service organization;
- a background marking identifying said terminal service organization; and
- a foreground marking identifying said terminal service organization.

35. (Original) The method of Claim 18, wherein the step of said terminal service organization receiving said organization revenue includes at least one member of the revenue reception collection comprising:

- receiving a monetary transfer of said organization revenue into a bank account controlled by said terminal service organization; and
- receiving a check for said organization revenue by said terminal service organization.

36. (Original) The method of Claim 18, wherein the interactive means comprises a stream generation component, an interviewer component and an editor component;

wherein said stream generation component include generating at least one member of the stream collection comprising said audio stream and said video stream;

wherein said interview component includes a member of an interviewer option collection, comprising a no-interviewer option, a minimal interviewer option, and a maximal interviewer option;

wherein said editor component includes a member of the editing collection comprising a no-editing option, a minimal editing option, a more editing option, and a maximal editing option.

1 37. (Original) The method of Claim 36, wherein said stream collection further includes said text.

1 38. (Original) The method of Claim 36, wherein said interview component further includes an  
2 interview language selection.

1 39. (Original) Said avenue provided to said customer, said customer instructions, said web-service  
2 products, said web-site revenue, and said organization revenue as products of the process of Claim  
3 18.
